Resilience 4 for Dairy

1st January 2021 – 31st December 2023

Resilience for Dairy (R4D) has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement N°101000770.

R4D

R4D – which stands for *Resilience for Dairy* – is the name chosen for an EU-funded project which aims to improve the European dairy sector's sustainability and resilience. In order to achieve this goal, the 18 partners of R4D have created a network enabling the exchange of practical and scientific knowledge among European dairy farmers, researchers and other relevant stakeholders.

“RESILIENCE: an ability to overcome a shock and adjust to changes”

Implementation

In each participating country of the project, there will be one **Farm Facilitator (FF)**, one **Dairy Farm Network** as well as a **National Dairy AKIS (NDA)**. The FF will connect dairy farmers (Dairy Farm Network) and their associations, companies (animal feed, dairy, etc.), researchers and other stakeholders of the dairy sector to encourage the exchange of information and knowledge in the NDA.

In addition, Farm Facilitators will interact strongly with the Knowledge Facilitators of the three Knowledge Areas of dairy resilience to ensure that proposed solutions will be ready for practice and can be adopted by dairy farmers.

STEP 1
Identify farmer's needs at EU level

STEP 2
Map all best practices & solutions

STEP 3
Establish key factors to match practitioner's needs

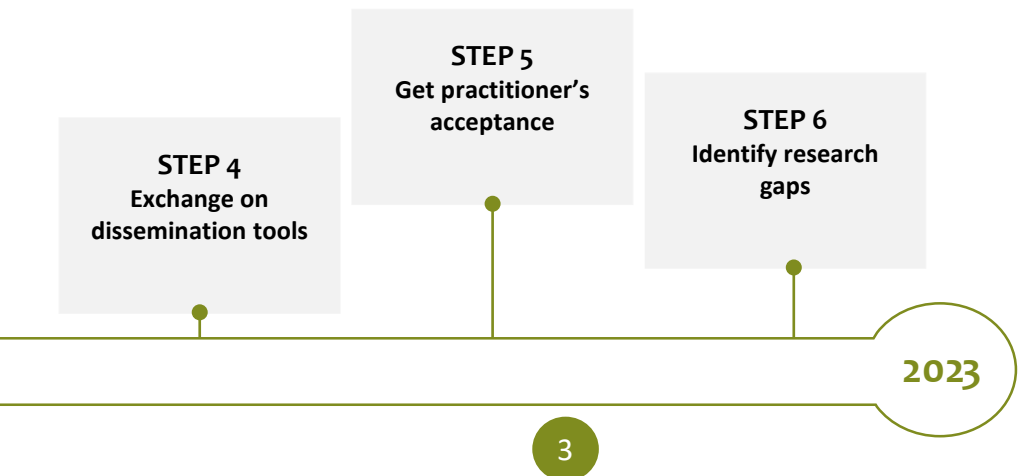

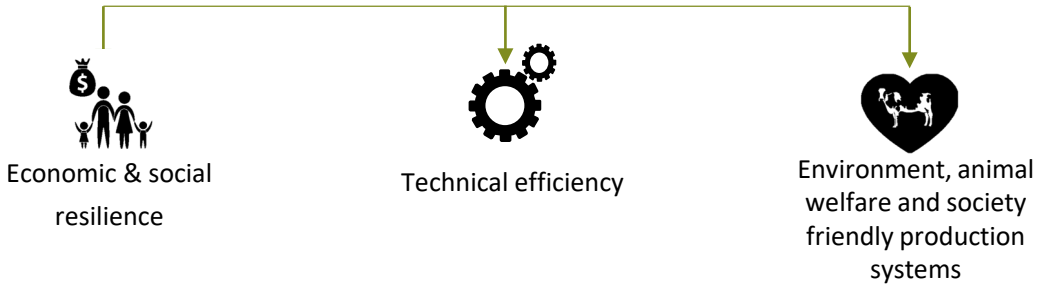

2021

PROJECT IMPLEMENTATION

Objectives

- Establish a range of **best practices** that are tailored to answer each farmer's specific needs and society's expectations.
- Improve the economic efficiency and social resilience of farms.
- Improve their technical efficiency and the use of local resources.
- Encourage agricultural systems that meet the environmental and welfare expectations of society.
- Create a solid network that will live throughout the project and beyond.

R4D partners are aiming at enhancing the resilience of dairy farmers.
In order to make this happen, they will focus on **3 Knowledge Areas** :
